

PRODUCT DETAILS

«Bio 3000» dose for «Bio angelo 3000» purification system :

The «Bio 3000» dose is a purifying liquid solution which is 100 % organic and non oxidizing, for the «Bio angelo 3000» air purification and deodorising system. The difference between most other purifying processes is that Bio angelo is not oxidizing. (The process of air oxidization prematurely ages all the living cells.)

AREAS OF USE

Eliminates viruses, moulds, yeasts, bacteria, (legionnaires disease, mycobacterium tuberculosis, staphylococcus...).

Medical infrastructures - schools and crèches - factories - hotels/guest houses - offices/meeting rooms - receptions areas.

PRODUCT SPECIFICATION OF THE «BIO 3000» DOSE

The product offers an air filtration solution which is 100% organic.

10 years of research were needed to identify the component mixes, required doses and then to test them.

To date, no recognised biological particle is known to resist the Bio angelo system (virus, mould, yeast, bacteria, legionnaire's disease, mycobacterium tuberculosis, staphylococcus...).

The purification system has been tested and approved in renowned laboratories of international standing such as the Pasteur Institute at Lille, the NSD Laboratories in the United States, the Max Panck Institute in Berlin and the CEA etc...

The solution complies with FDA standards and contains no toxins due to its biological formula.

The concept, processed and developed by **Aroma Concept Bio (AC bio)** allows the optimisation and utilisation of the dual effect of the liquid :

- Organic purification by filtration allows the capture and elimination of unhealthy biological particles,
- Preserves the purified environment by restoring organically saturated air particles.

Additionally, the solution can be enhanced with pleasant smelling natural perfumes allowing the air to be scented.

TECHNICAL FEATURES

- Active elements compliant with product standards : EN 140, EN 1275, EN 13727
- Maximum air volume treated : 200m³ per unit.
- Consumption per «Bio 3000» dose : 1 per month
(for 3 hours per day, medium power)
- Natural perfumes available :Lemon - Eucalyptus - Neutral.
- Storage temperatures : -10°C to +25°C

Suitable for :
